Bullseye Food Packaging

**THE EXPERTS IN
SUSTAINABLE MEAL PACKAGING**

Established in 2009, Bullseye is a market leader in providing safe, environmentally-friendly food packaging solutions to meal providers of all sizes.

AN EXCLUSIVE MEAL PACKAGING SYSTEM

Our unique system combines a comprehensive selection of paper-based, multi-compartment trays with a range of easy-to-use sealing machines. Improved safety, strong environmental credentials and better nutritional value are just some of the advantages our trays hold over their plastic or metal alternatives. When you see our system in action it becomes clear why so many meal producers have made the switch to paper.

A BESPOKE SOLUTION

Bullseye don't just supply the packaging. We will work together with your catering teams and operational staff to design and deliver a bespoke meal packaging solution to help you make the most of your available space, resources and budgets. Planning, delivery, installation and training are all part of the service, however large or small your operation.

ADVICE YOU CAN TRUST

With experience gained across a wide variety of sectors, from small-scale community meal providers to large industrial operations, we are the experts in providing not only the packaging, but also advice and guidance. We are also an ISO 9001:2015 certified company, demonstrating our ongoing commitment to running a professional, sustainable and trustworthy business.

LOOKING TO THE FUTURE

As the world changes and evolves, so must the ways we package our food. We are constantly working with manufacturers and suppliers to improve our packaging and make it even more environmentally sustainable, with a completely compostable tray able to take the rigours of freezing, microwaving and high oven temperatures getting closer all the time. Whilst we are on this journey, we are pleased to offer an extensive range of 100% biodegradable consumables, with available products including cups, tumblers, soup bowls, straws and cutlery. This range is suitable for all markets, from street food market stalls to large scale caterers, who are looking to make the switch from plastic and demonstrate their ongoing commitment to protecting our environment.

Whilst you will find a wide range of our most popular products within the pages of this catalogue, we are unable to accommodate everything we supply, so if the product you require is not listed, please do get in touch and we will be happy to help.

The Bullseye Team

PAPER PULP TRAYS

These innovative meal trays are available exclusively from Bullseye Food Packaging. Our trays:

- Stay cool to the touch, even when the food inside is piping hot
- Can go in the oven to 210 °C, are microwavable and can be frozen down to -40 °C
- Maintain their shape when heated and do not shatter if dropped when frozen
- Are fully sustainable, recyclable and 98% compostable
- Seal in nutrition and freshness
- Are sealed across all compartments, preventing cross-contamination

3-Compartment **Cream**

1-COMPARTMENT PAPERBOARD TRAYS

If you need customisation, our paperboard trays may be the answer - typically any size of single compartment tray can be created to customer requirements (volume depending). You can even have them printed to your own design specifications. They are perhaps a little less robust than our paper pulp trays, but they offer greater flexibility in their design.

Much like our pulp trays, they can be heated in an oven or microwave to 210°C and are freezable down to -40°C. They are also fully recyclable with your normal paper waste (after rinsing, much like other food containers).

Please find below some examples of available paperboard trays. If the size or style you require isn't listed, please get in touch and we will be happy to help.

290 ml Paperboard Tray

Item 80006

Capacity: 290 ml
Dimensions: 122 x 122 x 35 mm
Qty / Case: 1500

Qty / Case: 500

100% FULLY COMPOSTABLE MEAL TRAYS

Our new fully compostable range of trays are made from sustainably-sourced paper pulp and come in a wide variety of sizes:

- Meal Trays – with one, two or three compartments
- Multi-Portion/Gastro Trays – in 1/8, 1/4, 1/3 and 1/2 gastro sizes, with multiple depth options
- Fresh Produce Trays – ideal for packing fresh vegetables, fruit or meat and can be either heat-sealed or cling-wrapped

As with our other paper trays they are safe for use in the oven (up to 180°C), microwave and freezer (down to -40°C) and are either home compostable or kerbside recyclable with your other paper waste.

To accompany our new range of compostable trays, we are pleased to be able to offer a fully compostable sealing film, made from cellulose, to further enhance the environmental credentials of your meal packaging. These trays are also compatible with our innovative, micro-perforated PET sealing film (details on page 10).

Compostable Sealing Film - 180mm wide

Item 36018

Dimensions: 250m x 180mm

TRAY SEALING FILM & LIDS

We offer a range of films to seal our trays, depending on your requirements. Our most popular film is micro-perforated: there are microscopic holes in the film, large enough to release steam but not so large that liquid seeps out. This means that there is no need to pierce the film when heating the meal, and condensation does not form on the inside, which would otherwise degrade the quality and nutritional value of the meal. This film is 'hot-peel' – the seal is strong when cold or at ambient temperature, but weakens sufficiently when heated so as to be removed in one piece. Our hot-peel film is also available non-perforated.

We also offer a cold-peel film, which performs to a higher standard when being removed cold or frozen, as well as film printed to your design. Please ask for more details.

HOT-PEEL MICRO-PERFORATED FILMS

For Smaller Trays

Item 62054

For Larger Trays

Item 59432

The above are offered as standard with our trays - please enquire about other film types

Snap-On Lid for 2 & 3 Compartment Paper Pulp Trays

Item 60981

Qty / Case: 400
Made from Polyester - NOT RECYCLABLE

OUR TRAY SEALING SYSTEM

Bullseye Food Packaging supplies a range of easy-to-use hand operated or semi-automatic sealing machines capable of meeting the needs of most community, specialist and industrial-scale meal producers.

All our machines use heat sealing technology to ensure a secure seal around each individual tray compartment. This means a safe, leak-proof film lid can be securely fixed as soon as the tray is filled. The film adheres to the rim of the tray as well as to the edges of each compartment to prevent spillage of one part of the meal into the other during transit. This leads to more attractive, tasty, nutritious meals than may otherwise be possible in other trays and, despite the secure seal, the film lid can be easily removed prior to consumption.

Our most popular machines are listed below, but we also offer a bespoke range of sealing equipment for high speed capability, as well as machines suitable for a retail environment. Please contact us for details.

1308 Heat Sealing Machine

- Our most popular sealing machine
- Suitable for small to medium operations
- Manually operated, sealing 6-8 packages per minute
- Seals and cuts film in one step
- Constructed from easy-to-clean stainless steel
- Simple to operate
- Hot plate self aligns, ensuring complete and even sealing of film to tray
- Uses straight-slit rolls, unprinted or random repeat printed
- Available on low-cost rental to minimise capital outlay

1808 Heat Sealing Machine

- Semi-automated, suitable for large scale operations
- Constructed of stainless steel and aluminium
- Automatic and adjustable discharge
- Rotary motion sealing up to 35 packages per minute
- Continuous motion of the conveying system
- Removable tray carriers constructed of aluminium
- For use in ambient temperature (10°C or above)
- Pre-set heat roll temperature provides optimal seal tack

Tulip Muffin Cases - Yellow

Item 81993

Dimensions: 175 mm
Qty / Case: 150

Tulip Muffin Cases - Brown

Item 81992

Dimensions: 175 mm
Qty / Case: 150

Cupcake Cases

Item 81991

Colour: Mixed Colours
Dimensions: 51 x 38 mm
Qty / Case: 192 (approx. 24 per colour)

Plain White Cake Box

Item 81987

Dimensions: 153 x 153 x 77 mm
Qty / Case: 250

Kraft Cake Slice Wedge - Small

Item 81965-03

Dimensions: 155 x 65 x 50 mm
Qty / Case: 500

Kraft Cake Slice Wedge - Large

Item 81965

Dimensions: 144 x 85 x 90 mm
Qty / Case: 500

TUMBLERS

7oz Printed PLA Tumbler

Item 81016

"I'm a green cup" print
Qty / Case:

3000

Half Pint Printed PLA Tumbler

Item 81007

"I'm a green cup" print
Qty / Case:

2100

Pint Printed PLA Tumbler

Item 81008

"I'm a green cup" print
Qty / Case:

960

7oz Clear PLA Tumbler

Item 81001

Qty / Case:

3000

Half Pint Clear PLA Tumbler

Item 81005

Qty / Case:

2100

Pint Clear PLA Tumbler

Item 81006

Qty / Case:

960

PAPER STRAWS

Straight Paper Straws

Various lengths, bore sizes and colours available - please ask for details.

Flex Paper Straws

Various lengths, bore sizes and colours available - please ask for details.

We offer a wide range of paper straws in various colours and sizes, including flexible paper straws!

BIOCUPS (PLA)

150ml BioCup

Item 88150

Qty / Case: 2000

200ml BioCup

Item 88200

Qty / Case: 2000

250ml BioCup

Item 88250

Qty / Case: 2000

250ml BioCup Tumbler

Item 88250-01

Qty / Case: 1000

280ml BioCup

Item 88280

Qty / Case: 2000

Lid for 150-280ml BioCup - Flat, No Hole

Item 8876F

Qty / Case: 1000

Lid for 150-280ml BioCup - Dome, No Hole

Item 8876DN

Qty / Case: 2000

Lid for 150-280ml BioCup - Dome, X-Slot

Item 8876DX

Qty / Case: 1000

300ml BioCup

Item 88300

Qty / Case: 1000

360ml BioCup

Item 88360

Qty / Case: 1000

360ml BioCup Tumbler

Item 88360-01

Qty / Case: 1000

420ml BioCup

Item 88420

Qty / Case: 1000

500ml BioCup

Item 88500

Qty / Case: 1000

500ml BioCup Tumbler

Item 88500-01

Qty / Case: 1000

600ml BioCup

Item 88600

Qty / Case: 1000

700ml BioCup

Item 88700

Qty / Case: 1000

**Lid for 300-700ml BioCups
- Flat, Closed Hole**

Item 8896F

Qty / Case: 1000

**Lid for 300-700ml BioCups
- Dome, No Hole**

Item 8896DN

Qty / Case: 1000

**Lid for 300-700ml BioCups
- Dome, X-Slot**

Item 8896DX

Qty / Case: 1000

**Lid for 300-700ml BioCups
- Dome, Open Hole**

Item 8896DB

Qty / Case: 1000

**Lid for 300-700ml BioCups
- Sipper Hole**

Item 8896S

Qty / Case: 1000

HOT DRINK CUPS

Single Wall White 4oz

Item 81178-9

Qty / Case: 1000

Single Wall Kraft 8oz

Item 81179-001

Qty / Case: 1000

Single Wall Kraft 12oz

Item 81178-201

Qty / Case: 1000

Single Wall Green Print 8oz

Item 81160

Qty / Case: 1000

Single Wall Green Print 12oz

Item 81161

Qty / Case: 1000

Single Wall Green Print 16oz

Item 81162

Qty / Case: 1000

Double Wall White 8oz

Item 81163-04

Qty / Case: 500

Double Wall White 12oz

Item 81164-04

Qty / Case: 500

Double Wall Kraft 8oz

Item 81163-10K

Qty / Case: 500

Double Wall Kraft 12oz

Item 81164-11K

Qty / Case: 500

Double Wall Purple Print 8oz

Item 81163

Qty / Case: 500

Double Wall Purple Print 12oz

Item 81164

Qty / Case: 500

LIDS & ACCESSORIES FOR HOT DRINK CUPS

Compostable White Sip-Thru Lid 8oz
Item 81226

Qty / Case: 1000

Compostable White Sip-Thru Lid 12/16oz
Item 81227

Qty / Case: 1000

Compostable Black Sip-Thru Lid 8oz
Item 81228

Qty / Case: 1000

Compostable Black Sip-Thru Lid 12/16oz
Item 81229

Qty / Case: 1000

Clutch 8oz
Item 81210

Qty / Case: 1000

Clutch 12/16oz
Item 81211

Qty / Case: 1000

2 Cup Carrier Tray (Pulp)
Item 81238

Qty / Case: 360

4 Cup Carrier Tray (Pulp)
Item 81237

Qty / Case: 180

4 Cup Carrier (Card)
Item 81244

Qty / Case: 200

5.5" Coated Wooden Stirrers
Item 81715-C

Qty / Case: 10,000

7" Coated Wooden Stirrers
Item 81704-C

Qty / Case: 10,000

Napkins

A range of napkins in various sizes and colours are available - please ask for details.

MATERIALS USED IN OUR PRODUCTS

PAPER PULP (IN OUR PULP MEAL TRAYS)

We believe our paper pulp (or fibre) trays are some of the 'greenest' around. The trays are made from pre-consumer waste. The pulp which forms the basis of the tray is made from the off-cuts of paper used for making drink cups, juice cartons and other paper containers, which would otherwise be disposed of. These off-cuts are turned into paper pulp which is formed into our trays. The water used in the process is all fully recycled. As far as possible all fibre is obtained from sustainable sources, with most of these being individually certified as such. As a general comment, statistics show that the forestry areas which supply the pulp for these trays are actually growing in size. Our trays are lined with a small amount of plastic (PET) in order to make them leakproof and generally usable in the oven, microwave and freezer; this lining forms around 2% of the weight of the tray. We are working with our manufacturers towards a biodegradable alternative, but at the moment PET is the best available material for this purpose. The trays may be recycled with other paper waste (the tray should be rinsed out to remove food waste) and may be composted in industrial composting facilities where these exist. Being made from paper it is generally recognised that the paper content would decompose in landfill over a period of time (depending on the heat available) should the trays find their way to such sites.

PAPERBOARD (IN OUR BOARD MEAL TRAYS)

All the pulp used to make the board comes from sustainable sources, registered and verified with the PEFC (Project for the Endorsement of Forest Certification). The paper used to make the trays is usually sourced from forests in northern Europe/Scandinavia. Much like the pulp trays there is a small amount of PET plastic used to line the board – this makes up around 10% of the weight of the tray. This number is higher than in our pulp trays because the board trays are so much lighter than the pulp – the actual amount of plastic used is similar between the two tray types. The paperboard trays are fully recyclable with your normal paper recycling, provided they are rinsed out first (much like all other food containers). Unlike the pulp trays, board trays cannot currently be composted in industrial facilities (due to the percentage of plastic allowed in the composters). However, the paper content would in time decompose in landfill (depending on the heat available).

PAPER/KRAFT (IN OUR 100% BIODEGRADABLE RANGE)

Paper for our biodegradable products only comes from sustainable forestry. If printed, only water, vegetable and/or soy inks are used. Kraft is a variety of paper; it has a high tear-resistance because of the high density of fibres, which also makes it stronger than other paper products. **Disposal** – Will biodegrade within 8-12 weeks in industrial composting facilities. Alternatively recycle with other paper products after rinsing off food content. If food cannot be removed, dispose of with waste destined for landfill where it will still biodegrade but the process may take longer (depending on the amount of heat and moisture available).

BAGASSE/SUGARCANE/BIOCANE

This is a by-product of sugarcane production and would otherwise be wasted. Its environmental credentials are outstanding, but it is unsuitable for long-term contact with food (especially wet food) as the products are unlined. We recommend that any food containing liquids be consumed within 30-45 minutes of coming into contact with the product to avoid damage or leakage (drier foods should be fine for a slightly longer period). **Disposal** – Will biodegrade within 8-12 weeks in industrial composting facilities and is suitable for home composting (although the composting process may take longer).

PALM LEAF

Palm leaves are treated with heat and pressure to mould them into the products you use. As they are untreated and natural, each item will have an individual look and feel. **Disposal** – Will biodegrade within 8-12 weeks in industrial composting facilities. Otherwise dispose of with waste destined for landfill (where this process will still occur but take longer).

PLA/CPLA

PLA stands for PolyLactic Acid and is usually made from fermented corn sugars or sugar beets. PLA plastics have similar features as traditional petroleum plastics, but they're considerably more eco-friendly (for example, its production generates 75% less greenhouse gases than the production of conventional plastics). PLA products are sensitive to heat and therefore only suitable for cold foods/liquids, whilst CPLA has undergone a crystallisation process and can withstand higher temperatures than PLA (typically up to 85°C). Disposal – Will biodegrade within 8-12 weeks in industrial composting facilities. If put in regular waste (i.e. destined for landfill) this process will still occur but will take longer (potentially years). For comparison, petroleum plastics can take hundreds, or even thousands, of years to disappear, still making PLA a significant improvement. **Important notes:** PLA will not biodegrade in water and must not be placed in with your regular plastic recycling as this will contaminate the recycling process.

PLEASE NOTE: Whilst we are happy to provide advice and guidance, we always recommend undertaking your own, robust testing procedures, and communicating with your waste management providers to ensure all waste is being processed correctly.

If you would like any more information about the materials used in any of our products or would like advice on their disposal please feel free to contact us.
